Router Quick Start

***Your router will arrive preconfigured.
All you will need to do is plug in as below and wait a few minutes once it has logged in.***

1. Use the supplied grey cable to connect from the dsl port, into the splitter, and the splitter into the wall. (If you have a square port in the wall, then the splitter may not be needed)

2. Ports 1-4 are your standard network ports to connect devices.

Connect the supplied power cable here.

See your info pack or router card for further details such as wifi password

Router Quick Start
